

Autonomic Dysreflexia Alert Card

Name: _____
has a spinal cord injury and is at risk for a condition known as Autonomic Dysreflexia. Unless this condition is treated quickly, it could lead to convulsions, stroke, or death from high blood pressure. See below and the reverse side of this card for proper treatment of Autonomic Dysreflexia (Autonomic Hyperreflexia).

Local Emergency Room: _____

Autonomic Dysreflexia can occur with persons with spinal cord injury (SCI) above T6. This can be life threatening because of elevated blood pressure.
Signs/Symptoms: High blood pressure; severe/pounding headache; goose bumps, sweating; flushing or pallor; stuffy nose; nausea or vomiting; "not feeling right".
Common Causes: Full bladder, full bowel, skin sore, ingrown toenails, tight clothing, but could be anything that would have caused pain below level of injury prior to injury.

(continued on other side)

Treatment:

1. Check blood pressure.
2. Sit up as straight as possible, remove abdominal binder or any other tight clothing (i.e. TED Hose, shoes).
3. Check bladder
Indwelling catheter (foley, suprapubic):
 - A. Check all tubings for kinks or a full bag
 - B. Flush catheter. If nothing returns or if unable to flush, then change catheter.Intermittent catheter program:
Catheterize immediately
4. Check bowel for fullness
 - A. Insert xylocaine jelly into rectum
 - B. Gently remove stool if present
5. Check skin for sores, ingrown toenails, trauma (broken bone or severe cut). Tests and procedures can also trigger Autonomic Dysreflexia (cysto, gynecology exam).
6. If above treatments fail to bring blood pressure down:
 - A. Go to the nearest emergency room
 - B. Give them this card
 - C. This hypertension should be treated medically
7. Apply nitroglycerine paste 1 – 2 inches to skin every 2 hours. May wipe off if blood pressure is stable. Reapply if needed. Nifedipine 10 mg capsule (immediate release form). May repeat in 20 – 30 minutes if necessary. Avoid sub-lingual which can cause abrupt hypotension.
8. Check blood pressure at least every 3 minutes. It can change rapidly.
