

INPATIENT ANALYSIS

DO YOUR PROGRAMS NEED A CHECK-UP?

COMPREHENSIVE ANALYSIS PROCESS

The Mary Free Bed Advisory Group offers a variety of comprehensive analyses to ensure your rehabilitation program is operating at peak performance. We have a three-step process:

Step 1: In-Depth Assessment

The foundation for all analysis is sound data and an understanding of the unique processes within your program. We begin by working with you to gather pertinent information from your inpatient rehabilitation program, then analyze that information and identify opportunities to enhance your performance.

Step 2: Action Planning

Our experts study the data as it relates to your goals, capacity, competition and predicted rehabilitation trends. We present our findings to your team and collaboratively create action plans.

Step 3: Solution-Driven Implementation

You receive guidance implementing the action plans. Expect periodic on-site visits to reinforce recommendations to overcome obstacles that may impede success.

PROGRAM ANALYSIS

If you want to drive outcomes, enhance quality and grow your program while complying with inpatient rehabilitation facility (IRF) regulations, this offering is for you. It includes identification of the following opportunities:

- Outcome enhancement
- Programmatic growth and development
- Enhanced financial performance
- Documentation, coding and billing risks

QUALITY PERFORMANCE ANALYSIS

With the increased emphasis on value-based care, this service helps you ensure your program has superior outcomes while maintaining operational efficiencies. We provide you with targeted opportunities for improvement based on your program's historical and current performance, including but not limited to:

- Quality Reporting Program (QRP) standards and measures
- Pressure ulcer data
- Catheter-associated urinary tract infection (CAUTI)
- Central line-associated bloodstream infection (CLABSI)
- Acute care transfer rates
- Therapy utilization
- Readmission data

PRODUCTIVITY ANALYSIS

We analyze both therapy and nursing productivity, as well as identify barriers to productivity and share solutions. Some of the areas we evaluate include:

- Minutes/hours of services provided
- Acuity-based staffing
- Relative Value Units (RVU)
- Impact of space layout on productivity
