

INPATIENT QUALITY

TAKE CARE OF YOUR CARE.

QUALITY IMPROVEMENT

Regulators, payers and patients demand consistently high-quality health care. Tracking quality metrics provides the necessary data to focus on areas that need attention and facilitates continual process improvement.

QUALITY PERFORMANCE ANALYSIS

With the increased emphasis on value-based care, this service helps you ensure your program has superior outcomes while maintaining operational efficiencies. We provide you with targeted opportunities for improvement based on your program's historical and current performance including but not limited to:

- Quality Reporting Program (QRP) standards and measures
- Pressure ulcer data
- Catheter-associated urinary tract infection (CAUTI)
- Central line-associated bloodstream infection (CLABSI)
- Acute care transfer rates
- Therapy utilization
- Readmission data

QUALITY REPORTING PROGRAM MEASURES

We have training for the entire interdisciplinary clinical team as well as PPS coordinators on coding for the Quality Reporting Program (QRP) from the Centers for Medicare & Medicaid Services (CMS).

Option 1: On-site or remote education about how to code items. We use your credentialing program (UDS or eRehab) for competency assessment.

Option 2: We provide on-site or remote education with paper competency assessments.

QUALITY AND OUTCOME TRACKING

Does your program collect a variety of data, but it doesn't gel in a cohesive fashion that enables performance to be trended, analyzed and improved? We create tracking methods that have user-friendly formats so quality and outcome measures are easily reported and analyzed.
